DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "50" in Figure 2 has been used to designate both the "support frame 52" and the "fulcrum 50". A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 8-13, and 15-18 are rejected under 35 U.S.C. 102(b) as being anticipated by McDonald (US # 3,656,337). McDonald shows a scale calibration system that is structurally identical the applicant's device. Granted, McDonald expressly states that he intended to remove any load from the conveyor during a calibration run in which the reference load 58 is applied to the weighing system 34, but since the device disclosed by McDonald and the device disclosed in the applicant's figures are virtually identical in structure, then the device shown in McDonald must necessarily be "capable" of the same functions as the applicant's device -- including being "capable of applying a reference load ... without interrupting the ability of the weighing system sense a load

against the conveyor." The examiner notes that the courts have held that in an apparatus claim a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7, 14, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over McDonald (US # 3,656,337) in view of McDonald (US # 3,850,023). McDonald ('337) discloses the claimed invention except for the programmable "controller" and the "storage" means. Since McDonald ('023) shows that it is known to use a computer "controller" (with its associated RAM "storage") to control a conveyor weighing system, it would have been obvious to the ordinary practitioner to modify the system of McDonald ('337) to include the computer of McDonald ('023) motivated by its art recognized suitability for its intended use. See *Ryco, Inc. v. Ag-Bag Corp.*, 857 F.2d 1418, 8 USPQ2d 1323 (Fed. Cir. 1988); and, *MPEP* § 2144.07.

Conclusion

4. Method claim 20 is allowable over the prior art since there is no suggestion in the art of record to program a conveyor weighing system to apply a calibration weight to the conveyor weighing system while a working load is still being conveyed across, and sensed by, the conveyor weighing system and comparing the combined weight signal with the expected combined calibration weight and working load weight to determine if the weighing signal is out of calibration.
